Physics and chemistry of the Earth is an international interdisciplinary journal for the rapid publication of collections of refereed communications in separate thematic issues, either stemming from scientific meetings, or, especially compiled for the occasion. There is no restriction on the length of articles published in the journal.

Physics and chemistry may overlap when the system under study involves matter composed of electrons and nuclei made of protons and neutrons. On the other hand, chemistry is not concerned with other forms of matter such as quarks, mu and tau leptons and dark matter. Although fundamental laws that govern the behaviour of matter apply to both in chemistry and physics, the disciplines of physics and chemistry are very distinct.

In "The Mathematics of Physics and Chemistry" [Margenau and Murphy], the section about the existence of integrating factors comprehensively treated exact and inexact differentials. The chapter on the application of Jacobians [functional determinants] to thermodynamics was in my opinion, excellent and not to be found elsewhere.

Chemical physics is a subdiscipline of chemistry and physics that investigates physicochemical phenomena using techniques from atomic and molecular physics and condensed matter physics; it is the branch of physics that studies chemical processes from the point of view of physics. While at the interface of physics and chemistry, chemical physics is distinct from physical chemistry in that it ...

Graphene films on different surfaces are expected to exhibit significant differences in their properties, which lead to changes in their morphology, electronic structure, surface chemistry/physics, and surface/interface states. Therefore, a thorough understanding of the surface/interface properties is of great importance.

Depending on how you select your electives, your major may not really matter that much in the end. I've known physical chemistry undergrads who've gone on to do graduate school in physics (and quite successfully at that), so making the choice now won't necessarily limit your opportunities in the future.

Integrated science experiments for college students in biology depend on the relationships between chemistry and biology, physics and biology, and all three traditional disciplines. Biochemistry is the study of the chemistry of organisms while biomechanics focuses on the physics of organisms.
