Alexander Newman’s book “Structural Renovation of Buildings” presents a comprehensive overview of the challenges, methods, and details in building renovation projects. The book’s chapters include focused discussions on steel, concrete, wood, and masonry repair. The second edition of Structural Renovation of Buildings: Methods, Details, and Design Examples clearly explains the newest methods and materials used for structural repair, strengthening, and seismic rehabilitation. The case studies illustrate the practical applications of the design methods discussed and the best practices that can be used to mitigate the problems that commonly arise during renovation projects.

Building renovation is booming, with more than 55 percent of all construction involving renovation, conservation, or reuse. This unique, practical guide, written by renowned engineer Alexander Newman, P.E...

Based on a new book with the same title, the seminar covers the practical methods of upgrading all major types of building materials and structural systems; steel, concrete, masonry, wood, and pre-engineered buildings. It examines typical renovation provisions of building codes and the issue of renovation vs. rebuilding.

The method of repair and strengthening would naturally depend very largely on the structural scheme and materials used...
